The Better Way

TO SERVICE YOUR DIESEL POWERED UNITS WITH DIESEL, COOLANT, CRANKCASE, TRANSMISSION & HYDRAULIC OILS, JSG HAVE THE UNITS TO ENABLE YOUR SERVICE PEOPLE TO CARRY OUT THE FILL & EVACUATION PROCEDURES SAFELY.

- Eliminates dirt and dust contamination in diesel fuel and other fluids
- Eliminates costly spillage of diesel fuel and other fluids
- Simultaneously protecting the environment
- While providing safety and cleanliness for servicing personnel

The on-going development of “FAST FILL SYSTEMS” product range addresses these problems when servicing your diesel powered units. This on-going development of the “FAST FILL SYSTEMS” product range provides greater cost savings through:

- Greater vehicle availability due to the elimination of contaminants entering the system
- The reduction in filling time for diesel fuel and other fluids
- Eliminate spillage

By installing the “FAST FILL” product range you will be impressed with the high quality and heavy construction of the products in the JSG/Fast Fill Systems range.

*For use in:*

- Mine/Quarry Fuel Farms
- Heavy Earth Moving Equipment - Mining, Quarrying
- Construction Machinery - Civil, Forestry, Agriculture
- Marine & Stevedoring Industry
- On Road Trucks & Buses
- Railway Industry
- Councils

#### Pressureless Diesel Tank Fast Fill Units

*PLA 150-*** Various Configurations of “AL” Bodies & Steel Receivers with Side, Remote & Top Fill Units Available.*

*** Refers to the Pressureless Diesel Tank Filling System Design for Plastic, “AL” & Steel Diesel Tanks.
This premium Fastfill Diesel nozzle has been proven to meet the harsh environments found in mining operations. The exterior of this all-metal nozzle has a powder coated finish to ensure durability. The main housing also has an extended wall thickness, making the SureLoc the diesel fast fill nozzle of choice for heavy-duty applications. The SL800 range of Sureloc Nozzles provides higher flow rates to 800 LPM. The internal construction of the SureLoc nozzle consists of Ball Bearing latch mechanism for a more positive and stronger connection onto the receiver whilst the diaphragm in the rear provides a better and smoother controlled shut off.

Refer to the Nozzle Repair/Service sheet for detailed repair information.

Minimum Diesel Fill Rates for Diesel Tanks
Pressurised Diesel Tanks = 125 LPM/33 US GPM
Pressureless Diesel Tanks = 95 LPM/25 US GPM

Refer to page 29 for individual plugs.
The Raptor Diesel Nozzle has been designed to meet the harsh environments found in mining operations and to address issues sometimes experienced with other designed nozzles. The exterior of this all-metal nozzle has a powder coated finish to ensure durability. The main housing also has an extended wall thickness, making the Raptor the diesel fast fill nozzle of choice for heavy-duty applications. The R800 range of Raptor provides higher flow rates to 800 LPM.

The construction of the Raptor nozzle combines the major features of the SureLoc and Pit Boss nozzles. The Elasto Dog latching mechanism allows positive latching where contamination on the receiver may present a problem but also has the diaphragm in the rear providing a better and smoother controlled shut off.

The Raptor Diesel Nozzle is available with a 2” NPT Diesel Inlet for flow rates to 800 LPM or 1 ½” NPT Diesel Inlet for flow rates to 567 LPM Flow Rates.

Refer to the Nozzle Repair/Service sheet for detailed repair information.
The PitBoss nozzle is a perfect fit for users looking for a more economical diesel fueling solution. Fewer internal components, all-metal construction, piston-driven engagement, and a powder coated finish, you won’t have to sacrifice quality for a lower cost.

The PitBoss is also available in all-steel construction for underground mining (Part No.28-N150PBSP) and also is available as “Brine Resistant (Part No.28-N150PBP-BR). The PitBoss nozzle has Elasto Dog latching mechanism allowing positive latching where contamination on the receiver may present a problem and has a piston shut off control at the rear end.

**Minimum Diesel Fill Rates for Diesel Tanks**

Pressurised Diesel Tanks = 125 LPM/33 US GPM
Pressureless Diesel Tanks = 95 LPM/25 US GPM

### Aluminium

| Model Number   | 28-N150PBP  
|----------------|-------------
| (28-N150PB W/O plug) |             |

| Flow Rate (min) | Refer to info above |
| Operating Pressure | 5.171 Bar / 75 psi (max) |
| Inlet Port      | 1 ½” NPT Female |
| Latch Mechanism | Elasto Dog |
| Material        | Heat-treated Aluminium |
| Weight          | 2.835 kg / 6lbs 4oz |
| Swivel P/No.28-S150 | 1 ½” NPT Male/Female |

### Steel

| Model Number   | 28-N150PBSP  
|----------------|-------------
| 28-N150PBS (W/O plug) |             |
| Flow Rate (max) | 567 LPM / 150 usgpm |
| Flow Rate (min) | Refer to info above |
| Operating Pressure | 5.171 Bar / 75 psi (max) |
| Inlet Port      | 1 ½” NPT Female |
| Latch Mechanism | Elasto Dog |
| Material        | Steel |
| Weight          | 7.08 kg / 15.6lbs |
| Swivel P/No.28-S150S | 1 ½” NPT Male/Female/Steel |

### Brine Resistant

| Model Number   | 28-N150PBP-BR  
|----------------|----------------
| (28-N150PB-BR W/O plug) |             |
| Operating Parameters | as per 28-N150PBP |

Refer to page 29 for individual plugs.
The Titan nozzle is the smallest and lightest diesel nozzle industry wide with an all metal housing, a non-slip powder-coated finish and has the most forgiving latching mechanism in dirty conditions. The unique patent pending design allows the nozzle to be field repairable. The one piece replacement cartridge means that field repair only involves removing the handle and replacing the cartridge. The Titan nozzle has Elasto Dog latching mechanism allowing positive latching where contamination on the receiver may present a problem and through the use of the Replacement Cartridge has a piston shut off control at the rear end.

Minimum Diesel Fill Rates for Diesel Tanks
Pressurised Diesel Tanks = 125 LPM/33 US GPM
Pressureless Diesel Tanks = 95 LPM/25 US GPM

Refer to the Nozzle Repair/Service sheet for detailed repair information.
Diesel Receivers (For Pressurised Diesel Tank)

Steel & Aluminium Diesel Receivers

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Description</th>

<td>Steel Receiver with plastic cap, purple poppet rated for 5 psi. Used on pressure units as a remote receiver in lieu of an R150SC-A, when using this remote receiver the 28-R150CV-Base and appropriate fittings must be used.</td>
</tr>
</tbody>
</table>

For receivers with aluminium caps order with "A" after the "C" in the above part numbers, eg. 28-R150SCA-A

NOTE: All the JSG x FFS Diesel Receivers & Diesel Vents have a 2” NPT Male thread. Do not use any 2” BSP x Half Sockets/Adaptors to mount any Diesel Units to the Diesel Tanks.

Flush Mount Bell Housing and Accessories

The flush mount Bell Housing allows your diesel tank to be fitted with a steel or aluminium receiver that does not protrude past the tank, providing a more safety and maintenance friendly solution.

The flanged bell housings are spun steel with a 2” NPT Female thread.

NOTE: To have the appropriate flange and diesel receiver combination, the flange and diesel receiver must be ordered as two separate items. All above diesel receivers suit both styles of Flanged Bell Housings.

The Flanged Housings are suitable to mount in Pressurised Diesel Tanks or the Pressureless Diesel Tank Units using the appropriate receivers.

Frequently flanged mounted diesel receivers are caked with dirt and mud. It is inevitable that eventually some of that contamination will find its way into the diesel tank.

To eliminate this problem the fitting of a skirt (28-FMF-SK) when used in conjunction with either the Fast Fill Plastic (28-C150P) or Aluminium (28-C150A) Diesel Receiver Dust Caps will provide total closure of the Bell Housing cavity and around the Diesel receiver eliminating contamination ingress.
Is your diesel refueling process plagued by constant dripping or a steady stream of Diesel? Chances are that your diesel receivers have not been changed out regularly or have been otherwise damaged. Worn receivers will cause leaking in the diesel refueling process and will prematurely wear out seals in the diesel nozzles, causing even more profuse leaking.

Check Valve with Replaceable Receiver & Dust Cap

28-R150CVC-A / 28-R150CVC-E

The Fast Fill “Check Valve” system is a revolutionary patented device that allows you to easily replace a worn receiver. As a safety device, it eliminates the potential of personnel being sprayed with diesel when uncoupling the nozzle from the receiver. As an environmental device, it helps eliminate diesel spills caused by damaged or worn receivers and from any potential misuse of proper receiver operation. It also eliminates the potential for diesel theft. The Remote R150SC-E Receiver has been used with the 28-R150CV-BASE & the 28-AD150 or 28-AD150J to have a remote fill point with the check valve fitted directly to the diesel tank. Komatsu, CAT and other dump trucks that have a 2” npt female fitting/blanking plate on the inner wall of the diesel tank can have the remote check valve fitted to minimise diesel leaks if the diesel fill hose is damaged by debris from the haul roads, etc.

Attractively priced, you can retrofit your entire fleet for a minimal investment.

The savings from lost diesel or a spill incident will make this product a must for your operations. The receiver is steel and is available with black poppet (9psi) for standard diesel tanks or purple poppet (5 psi) for remote filling of standard diesel tanks.

For remote mounting receiver applications where the 28-R150CV-BASE is fitted with 28-AD150 or the 28-AD150J adaptors and a remote fill hose.

Check Valve Receiver

28-R150CVRC-A / 28-R150CVRC-E

The replacement receiver for the “Check Valve” system is made from steel and is nickel-plated. This is a specialised receiver that is designed to work with the “Check Valve” system, and is not interchangeable with a standard receiver. The receiver is steel and comes in 9 PSI (black poppet) or 5 psi (purple poppet) pressure ratings for remote receiver applications.

Adaptors

When requiring a remote fill point in pressure systems these adaptors are available in choice of Female x 2” NPT or 2” JICM X 2.5”. This allows for the use of in-tank check valve with a remote receiver connection. Refer 28-R150CVC models above.

All Steel Pressure Systems for Underground Coal Mining

1. For Diesel Fuel Handling

- Underground diesel fueling solution
- All steel construction with non-slip powder-coated finish
- Most forgiving latching mechanism in dirty conditions
- Vent (28-150S) and receiver (28-R150SC-A) accommodate flow rates up to 150 GPM

\[

28-R150SC-A
Steel Receiver with plastic cap black poppet, rated for 9 psi. Used on standard diesel tanks on trucks etc.

28-R150SC-B
Steel Receiver with plastic cap, blue poppet, rated for 7 psi. Used on high and remote tanks.

28-R150SC-D
Steel Receiver with plastic cap, red poppet, rated for 11 psi. Used on negative head applications. Top fill pontoon.
With a continuing trend towards the fitting of lightweight and plastic diesel tanks comes the heightened possibility of pressure damage. JSG has acted to eliminate this problem by introducing a system which does not rely on the build up of tank pressure to shut off the diesel flow and, as a result, one that can be used on thin metal and moulded plastic tanks where pressurized systems would otherwise distort or damage the diesel tanks.

**System Operation**

The simple operation of the Fast Fill Pressureless System sees a signal sent to the INLET shut-off valve to close once the tank is near full, initiated by a signal sent by a vent/float assembly, thereby eliminating any overfilling problems. With ease of installation or retrofit to most existing diesel tank configurations, the pressureless system provides another reason to install the Pressureless Diesel Tank System from JSG Industrial Systems.

**Features:**

- The Pressureless Diesel Tank System eliminates any pressure build up in the diesel tank, therefore eliminating any possibility of pressure damage to the diesel tank
- Prevents costly diesel fuel spills and is therefore environmentally friendly
- Provides an enhanced safety factor by automatically shutting off at the desired level in the diesel tank
- Eliminates blow back of diesel fuel on the operator while refueling and keeps the operator away from any diesel spills
- Stops diesel theft from the diesel receiver and allows a damaged receiver attachment to be changed when the diesel tank level is “Above the Receiver”
- Once the Inlet Valve closes, the diesel nozzle will automatically turn off. Overriding the pressure sensitive diesel nozzle is not a recommended practice for either pressureless or pressurised diesel tank filling operations and must be avoided. Damaged diesel tanks and diesel spills may result from this dangerous practice

**Technical Information**

- The Pressureless Diesel Shutoff Units thread directly into an existing 2” NPT x ½ socket fitted to a standard pressurised diesel tank installation or a recessed bell housing adaptor or an existing flange mount with a 2” NPT socket
- The Pressureless Units can be adapted to most diesel tanks over 300 ltrs in size with custom made mounting adaptors
- Fill rate 120 LPM / 32 USGPM up to 800 LPM / 211 USGPM. It is not recommended that the flow rate be under the minimum flow rate
- No external sensing lines. The system has one internal Dash 6 “Signal Line”
- The Pressureless Units can be easily “Retrofitted” to existing tank configurations
- The Pressureless Units can be easily fitted to existing plastic diesel tanks
- The Pressureless Units can be “Direct in-tank” or “Remote fill installations”
- Proven design with major equipment manufacturers from haul trucks to dozers and other support equipment

Fastfill Systems have tested the 28-PLA150-M-SV units at 95LPM and 5 PSI at the nozzle inlet. At this flow rate and inlet pressure the Inlet Valve closes off with a 5 to 6 second delay. Where two (2) or more nozzles are used all the nozzles MUST meet this minimum requirement. The delay will be longer for flows below 95LPM. It is not recommended that the flow rate be under the minimum flow rate of 120LPM. The extra Diesel Volume would need to be taken into consideration for any fill rates as the Standard “SHUT OFF TIME is 3 seconds at 560 LPM.

**NOTE:** At the lower diesel flow rate the Inlet Valve Shut Off will not be as firm as the higher diesel flow rates that this system can handle. Eg 800 LPM Max
Pressureless Fast Fill Shut Off System for Diesel Tanks

1. Pressureless Inlet Valve Assembly

For remote tank mount applications

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>28-R150SC-J</td>
<td>Steel Receiver with plastic cap, green poppet rated for 5 psi. Used on pressureless tank systems for “in tank” or remote mounting.</td>
</tr>
</tbody>
</table>

Our standard diesel receiver is made from steel and is nickel-plated to ensure a long life. Our receivers are completely compatible with all major fast fill diesel fuel nozzles. The colour of the poppet indicates the pressure ratings.

2” Male NPT Base

All Pressureless Diesel Receivers are made of Steel and have a GREEN Poppet. The PLA150M-SV and the R150CVRC-J use the Bell Housing as the mount on various units, such as articulated trucks and remote fill points.

The Two Piece Check Valve Receiver 28-R150CVRC-J

The replacement receiver for the Pressureless Diesel Tank System is made from steel and is nickel-plated. This is a specialised receiver that is designed to work with the 28-PLA150-M-SV Inlet Valve and can be fitted to the 28-AD150JR Remote Adaptor when a Remote Diesel Receiver Installation is required.

The 2 piece receiver has a 5psi Green Poppet pressure rating and is not interchangeable with standard 2”npt base diesel receivers.

NOTE: The 2 piece receiver is not interchangeable with the standard 2” NPT Base Diesel Receiver. Use the 28-AD150JR Adaptor for a remote install.

2. Pressureless Level Control

The level controls can be either Single Line, Dual Line or External Line. The Level Controls have removeable Ullage Spacers (28-PLA-M-10) these are used to adjust the shut off-level. Examples are shown on page 14 & 15.

Internal Single line: 28-PLA150-M-VLC
Internal Dual line: 28-PLA150-M-VLC DUAL
External Single line: 28-PLA150-M-VLCE

Steel Diesel Receiver
Diesel Filter Vents

**Direct Mount Filter Assembly 28-FFV150-PL**

The direct mount 3 micron filter with 2 check valves for air flow in and out mounted directly onto the level control vent unit 28-PLA150M-VLC.

Replacement 3 Micron filter can. Part no. 28-FFV-P-6.

**Remote Mount Filter Assembly 28-FFV150**

The remote mount 3 micron filter with 2 check valves for air flow in and out has a low profile for variable placement and universal mounting bracket for easy installation for side or bottom mounting. Only 200mm high.

Replacement 3 Micron filter can. Part no. 28-FFV-P-6.

**Breather and Filter Vent with Check Valve**

The Breather Check Valve 28-FF150-BCKV is used in conjunction with the Vent with Check Valve 28-V150H-CKV.

With an all metal construction the vent assembly has a one way check valve on air discharge which allows venting over 300gpm diesel fueling rate and prevents air from entering the tank through the vent opening. Only filtered air (recommended 3 micron) is allowed into the diesel fuel tank, while the check valve on the filter prevents diesel fuel contacting the filter media.

Replacement 3 Micron filter can. Part no. 28-FFV-P-6.

**High Volume Filter Vent**

If high volume filling is required, the Fastfill High Volume Filter Vent, part number 28-FFV150-HV, should be considered. It is also the ideal vent for large storage tanks and uses an enlarged Filter Check Valve.

**Filter Vent with Vacuum Break**

The FFV150-VB1 Filter Vent with vacuum break is used in conjunction with a desiccant filter (filter not included). When using desiccant filters on a tank, this style of Filter Vent will improve filter life.
Diesel Flowmeters

To complement the Fastfill product, JSG have available a range of oval gear flowmeters which provide high levels of accuracy and repeatability. Among the many flowmeter design principles available today, the oval gear still holds a top place both in simplicity and field proven performance.

General Specifications:
- Flow Range: 1~450 litres/min (0.26~120 USGPM)
- Nominal Sizes: 15~50mm (1/2”~2”)
- Linearity: +/-0.5% of reading
- Repeatability: +/-0.03% repeatability
- Temperature: -20~+120°C (-4~250°F)
- Materials: 316 stainless steel or aluminium
- Pulse Outputs: reed switch & NPN open collector (normal)

Standard Options:
- Modular process connections
- LCD Totaliser
- LCD Flow Rate Totaliser
- LCD Two Stage Batch Controller
- Intrinsically Safe EX proof (IECEx & ATEX approved) instruments
- 4-20mA, scaled pulse and alarm outputs
- Integral mechanical totaliser/batch register
- Quadrature pulse output
- Flanged or threaded inlet/outlet

*Meters up to 4” (2500 LPM Max.) are available on request*
Bulk Diesel Nozzle 28-N150B

The bulk transfer nozzle mates with the standard diesel receiver 28-R150#. This arrangement is used to transfer diesel to/from the diesel tanks/storage. The 28-N150B is commonly used as the QDC connection to evacuate the diesel from the diesel tanks and “Out of Service” diesel powered units. The Bulk Transfer nozzle is made of aluminium, and has an anodised actuating collar.

1 ½” NPT Female Base

Refer to page 28 for individual plugs

Diesel Nozzle Adapters

Our nozzle adaptors mate with a standard fast fill diesel nozzle to provide an extension to “splash fill” equipment. Adaptors are made from anodised aluminium, and are available in three different configurations.

Standard & Full Steel Nozzle 28-N100P & 28-N100SP

The body of the 28-N100P crankcase nozzle is made from nickel-plated steel, while the collar is made of anodised aluminium.

The body of the 28-N100SP crankcase nozzle is made from all steel, with steel collar & steel plug for applications requiring such product.

Both models have a 3 pin latching mechanism and a ¾” Male NPT Base

Universal U Series Standard Nozzle 28-N100UP & Full Steel Nozzle 28-N100USP

Our universal crankcase nozzle 28-N100UP can accept either a Standard or the “R” series crankcase receiver. The body of the universal crankcase nozzle is made from nickel-plated steel, while the collar is made of anodised aluminium.

The all steel version 28-N100USP is to be used with the 28-R100SC all steel receiver.

Nozzle R Series 28-N100RP

Accepts an “R” series crankcase receiver. The body of the crankcase nozzle is made from nickel-plated steel, while the collar is made of anodised aluminium.

¾” Female NPT Base

Standard & Full Steel Receiver 28-R100C & 28-R100SC

The body of the 28-R100C crankcase receiver is made from nickel-plated steel, while the poppet is made of anodised aluminium.

The body of the 28-R100SC crankcase receiver is made from all steel with a steel poppet and steel dust cap for applications requiring such product.

¾” Male NPT Base.

For Bulkhead Receivers refer to page 27.

Receiver R series 28-R100RC

Accepts an “R” series crankcase nozzle. The body of the crankcase receiver is made from nickel-plated steel, while the poppet is made of anodised aluminium.

Base ID = Female 1 5/16” – 12
Base OD = Male 1 5/8” – 12

The standard range of nickel plated crankcase nozzles and receivers (refer page 26) are now available in a full 8 colour range where required including red (existing), green, blue, purple, grey, orange, yellow and gold, colours not available in steel. Please note these do not form part of the MATRIX range and any coloured nozzle will fit with any coloured receiver. MOQ applies. For MATRIX information, see page 25.

All Standard and “R” series operating pressure is 500 PSI with 1500 PSI burst pressure.

Refer to page 29 for individual caps.
Coolant Nozzles & Receivers

**Standard Nozzle 28-N200P & 28-N200SP**

The body of the 28-N200P coolant nozzle is made from nickel plated steel, while the collar is made of anodised aluminium.

28-N200SP coolant nozzle is made from all steel with a steel collar & steel plug for applications requiring such product.

28-N200, 28-N200S ½” Male NPT Base
28-N200 34 ¾” Male NPT Base

**Standard Receiver 28-R200C & 28-R200SC**

The body of the 28-R200C coolant receiver is made from nickel plated steel, while the poppet is made of anodised aluminium.

28-R200SC coolant receiver is made from all steel, with a steel poppet & steel dust cap for applications requiring such product.

½” Male NPT Base

For Bulkhead Receiver refer to page 27

**Nozzle R series 28-N200R**

The body of the coolant nozzle is made from nickel-plated steel, while the collar is made of anodised aluminium.

½” Female NPT Base

**Receiver R series 28-R200R**

The body of the coolant receiver is made from nickel-plated steel, while the poppet is made of anodised aluminium.

Base ID = Female 7/8” – 14
Base OD = Male 1 3/16” – 12

NOTE: These units do not form part of the MATRIX range, for MATRIX information, see page 25.
All Standard and “R” series operating pressure is 500 PSI with 1500 PSI burst pressure.

Refer to page 29 for individual plugs & caps.
Standard Nozzle 28-N300P & 28-N300SP

The body of the 28-N300P hydraulic nozzle is made from nickel-plated steel, while the collar is made of anodised aluminium. The standard mechanism is a steel dog however it is now available with ball latch 28-N300B.

28-N300SP hydraulic receiver is made from all steel with a steel collar & steel plug for applications requiring such product.

Standard thread size ¾” Female NPT Base
Also available as ¾” Male NTP, part no. 28-N300-34

Standard Receiver 28-R300C & 28-R300SC

The body of the 28-R300C hydraulic receiver is made from nickel-plated steel, while the poppet is made of anodised aluminium.

28-R300SC hydraulic nozzle is made from all steel with a steel collar & steel plug for applications requiring such product.

¾” Male NPT Base.

For Bulkhead Receiver refer to page 27

Nozzle R series 28-N300RP

The body of the hydraulic nozzle is made from nickel-plated steel, while the collar is made of anodised aluminium.

1” Female NPT Base

Receiver R series 28-R300RC

The body of the hydraulic receiver is made from nickel-plated steel, while the poppet is made of anodised aluminium.

Base ID = Female 1 5/8 ” – 12
Base OD = Male 1 7/8 ” – 12

NOTE: These units do not form part of the MATRIX range, for MATRIX information, see page 25
All Standard and “R” series operating pressure is 500 PSI with 1500 PSI burst pressure.

Refer to page 29 for individual plugs and caps.
Transmission Nozzles & Receivers

Standard Nozzle 28-N400P & 28-N400SP

The body of the 28-N400P transmission nozzle is made from nickel-plated steel, while the collar is made of anodised aluminium.

28-N400SP transmission receiver is made from all steel with a steel collar & steel plug for applications requiring such product.

Standard thread size ½” Male NPT Base
Also available as ¾” Male NTP, part no. 28-N400-34
And 3/8” Female NPT, part no. 28-N400-38

Standard Receiver 28-R400C & 28-R400SC

The body of the 28-R400C transmission receiver is made from nickel-plated steel, while the poppet is made of anodised aluminium.

28-R400SC transmission nozzle is made from all steel with a steel collar & steel plug for applications requiring such product.

½” Male NPT Base

For Bulkhead Receiver refer to page 27

Nozzle R series 28-N400R

The body of the transmission nozzle is made from nickel-plated steel, while the collar is made of anodised aluminium.

¾” Female NPT Base

Receiver R series 28-R400R

The body of the transmission receiver is made from nickel-plated steel, while the poppet is made of anodised aluminium.

Base ID = Female 1 1/16 ” – 12
Base OD = Male 1 5/16 ” – 12

NOTE: These units do not form part of the MATRIX range, for MATRIX information, see page 25.
All Standard and "R" series operating pressure is 500 PSI with 1500 PSI burst pressure.

Refer to page 29 for individual plugs & caps.
Matrix 34 Series Nozzles & Receivers

Total Prevention of Cross Contamination

The MATRIX range of ¾” (34 series) R310-R380 series receivers and N210-N280, N310-N380 series nozzles are available from JSG Industrial Systems. The matrix range has been designed to allow users the ability to utilize the same sized nozzle and receiver across a single operation whilst being able to clearly differentiate between a variety of fluids commonly used on site.

Significantly, the products have been designed so that, while each series model has the same sized outer diameter, interlocking is only possible between nozzles and receivers of the same colour, thus preventing any cross contamination between usable fluids and allowing standardization of colours with relevant fluids across multiple sites or locations.

Features:

- All models come with colour coded nozzle/receiver to differentiate between commonly used fluids
- Capable of interlocking only with corresponding colour connector to prevent cross contamination
- All receivers fitted with caps and all nozzles fitted with plugs are stocked by JSG
- Receivers available without caps and nozzles without plugs upon request
- All receivers can be supplied with JIC fitting upon request. For this requirement minimum order quantity applies
- Machined steel body with coloured aluminium sleeves on nozzles
- Machined steel body with coloured aluminium poppets on receivers

Specifications:

- Temperature range: from -53°C to 135°C (-65°F to 275°F)
- Operating pressure 34 series: 1500 psi (with 3:1 safety factor)
Matrix Nozzles & Receivers

The 28-ET290 and 28-ET290J Matrix Evacuation Tool is designed to inter-lock with all R310 – R380 Matrix receivers for evacuation purposes, thereby eliminating the need to employ different coloured nozzles when evacuating waste product.

The 28-ET290 is designed with a ¾”NPT Female thread while the 28-ET290J is designed with a 1 5/16”-16 JIC Male thread. 

- One-way Evacuation Only Design
- Fits all Matrix receivers R310 to R380
- Internal Check Valve prevents use for filling & stops cross contamination
- Operating Pressure up to 103 bar (1,500 psi)

*All receivers fitted with caps & all nozzles fitted with plugs
*All receivers & nozzles can be supplied with JIC fitting upon request, MOQ apply
Bulkhead Receivers

The Bulkhead Receiver has an extended JIC Thread base that can be mounted through and secured to a steel backing plate.

The body of the Receivers are made from nickel-plated steel, while the poppet is made of anodised aluminium. The poppets are coloured to suit the PRODUCT.

-12 JIC Male BASE/Thread size = 1 1/16" x 12 TPI / Lock Nut included.

Service Boxes 28-SB100

Service boxes can be mounted to your mobile and stationary equipment to provide a central location for evacuation and refilling of your crankcase, coolant, hydraulic, transmission and diesel fluids. The service box are customised to any number or types of configurations.

Special Colours Available for Crankcase Nozzles & Receivers

Eight Coloured 28-N100UP Nozzles and 28-R100C Receivers

These Nozzles and Receivers are used where some companies allocate colours for different Oils and other fluid applications. They do not prevent cross contamination and only to be used for colour coding purposes. Refer Matrix units for prevention of cross contamination page 25.

These Nozzles & Receivers are not available in all steel.
Dust Cap Monitoring Systems (DMS)

The Monitoring Dust cap system has been designed to add an additional degree of safety to your operation by ensuring that machines involved in diesel and fluid refilling or evacuation operations are rendered inactive throughout the filling process. The Monitoring Dust cap system will eliminate accidental drive away if any fluid nozzle is still connected to the onboard Product Receivers & the INDIVIDUAL DMS caps are not refitted to the individual Receivers in the systems.

The Monitoring Dust cap system consists of modified diesel or fluid dust cap fitted to provide a signal to an alarm a warning device such as flashing light or even the on board demobiliser unit. This signal will remain with the warning device until such time that the DMS cap is with an inductive proximity switch that will securely be fitted to the appropriate receivers. At the same time, having the machine operable only when the dust caps are fitted, ensures that dirt and other potential contaminates are not able to ingress into the diesel or fluid tanks through the fill point.

Additional Benefits:

- Enhances your Hydrocarbon Management Systems
- Eliminates the risk of vehicle movement during the refilling or evacuation process
- Eliminates the risk of damage to people, property and equipment
- Minimises the risk of damage to the environment
- Minimises wear to refilling or evacuation hardware and reduce contamination to the diesel or fluid systems

### Additional Accessories

**28-FL100/12**

- **Caps and Plugs**
- To protect your investment, we offer caps and plugs for all of the nozzles and receivers. Caps and plugs are available in anodised aluminium or steel plastic caps also available for diesel receivers and include a lanyard made from vinyl-enclosed steel cable.
**Receiver Tool 28-R150SW**

The receiver tool is a 2½" deep socket that is used to remove receivers from the Diesel tank when they have become worn and need to be replaced. The tool is universal for all Fast Fill Systems™ receivers, including our steel, aluminium and check valve receivers.

**Check Valve Tool 28-KR150CV**

The installation kit 28-KR150CV for the “Check Valve” system, includes an Installation Socket 28-R150CVSW and Drain Tool 28-R150CVDT. The installation socket is specifically designed for the “Check Valve”, and is a required tool for installation. In the event that you need to drain your diesel tank, the drain tool makes this possible. These items can be ordered separately if required.

**Draining Tool 28-PLA150-M-DT**

To be used in conjunction with the pressureless inlet valve, 28-PLA150M-SV for the draining of diesel from the tank when fitted with a pressureless system.

**28-FMF-SK Skirt Installation Instructions - Placing Skirt on Diesel Dust Cap**

When mounting the skirt onto the dust cap, the easiest way is:

1. Lubricate around the back end (closed section) of the dust cap.

2. Feed skirt over lanyard remembering the larger outer diameter of the skirt is facing to the back of the dust cap.

3. Push skirt over the end of the dust cap all the way to the smaller recess located near the middle of the dust cap.

4. When placing the dust cap on the receiver that is mounted inside the flange, be sure to push the cap all the way in as the skirt will provide some resistance.

**Oil Sampling Valves with Bottle**

- **28-OS100 (½" NPT)**
- **28-OS100-34 (¾" NPT)**

The oil sampling valve can be fitted onto your existing crankcase line to allow samples to be drawn. The valve is made from anodised aluminium and includes a sample container.

*Replacement sample bottle - 28-OS100B*
